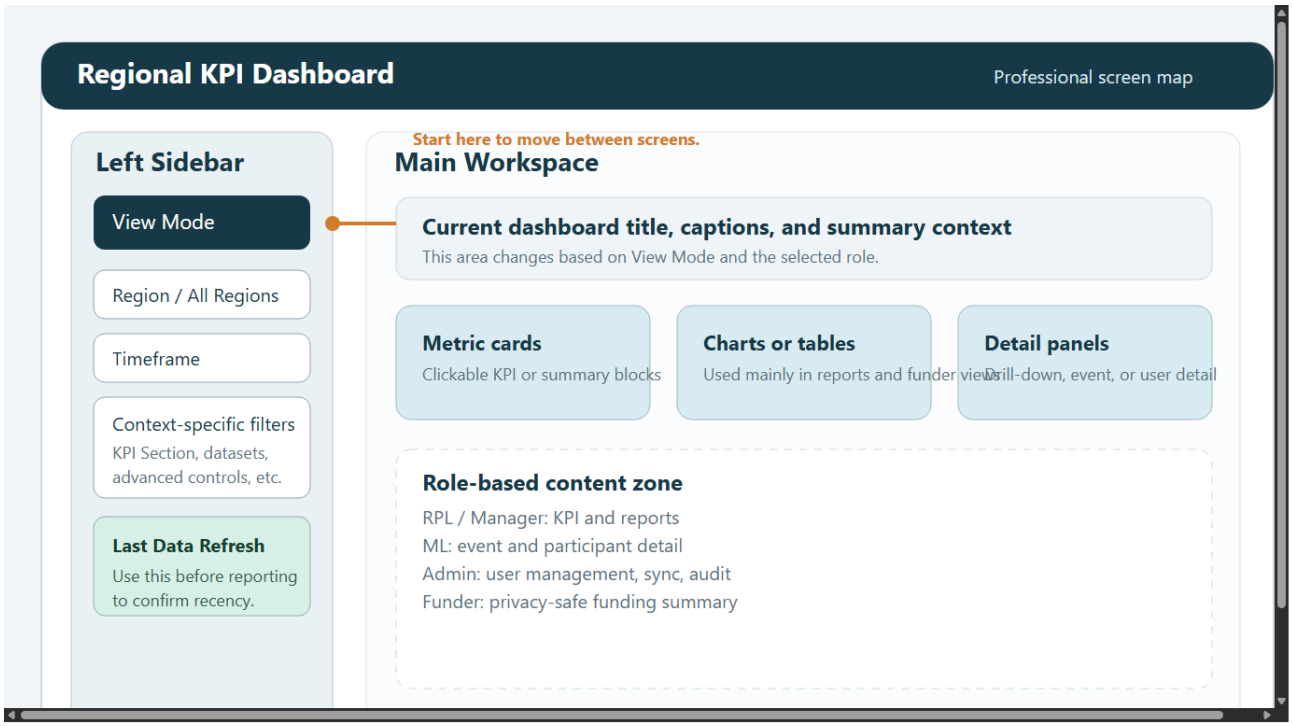
Full Regional KPI Dashboard Manual

Combined guide for RPL, Manager, ML, Admin, and Funder users



1. Introduction

This is the full handbook for the Regional KPI Dashboard.

It is intended for:

- new starters
- support staff
- managers helping other users
- anyone who wants one complete guide to the whole system

The dashboard combines several types of work in one place:

- headline KPI review
- structured reporting and exports
- event-level operational review
- funder-facing summary reporting
- qualitative case study capture
- administrative support and maintenance

Not every user sees every part of the dashboard. Access depends on role.

2. Core ideas shared across the dashboard

2.1 View Mode

Users move between screens using `View Mode` in the left sidebar.

Common screens include:

- `Admin Dashboard`
- `KPI Dashboard`
- `Custom Reports Dashboard`
- `Case Studies`
- `Data Request Form`
- `Funder Dashboard`
- `ML Dashboard`

2.2 Region and timeframe

Most views depend on:

- region filters
- timeframe filters

If expected data is missing, start broad and then narrow down.

2.3 Last Data Refresh

The sidebar shows when the dashboard last refreshed.

Always check this before using data in:

- meetings
- reports
- presentations
- support decisions

2.4 Drill-down

Many KPI cards can be opened to show the rows behind a total.

Drill-down helps users move from:

- summary

to:

- explanation

2.5 Role-based access

Different users see different views and different levels of detail. This is intentional. Missing screens or missing fields often reflect role design rather than a problem.

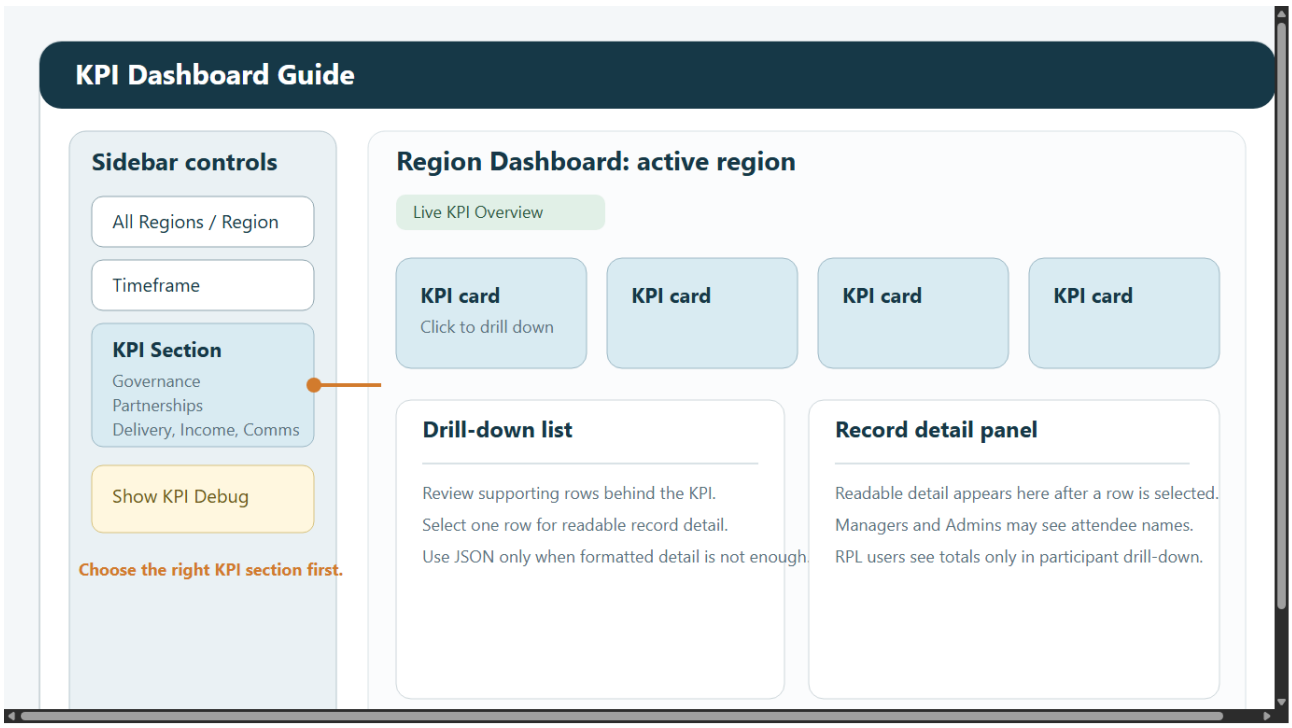
3. Role overview

Role	Main views	Typical use	Main limits
`RPL`	KPI, Custom Reports, Case Studies	regional monitoring and reporting	no Admin, no ML, no personal data
`Manager`	KPI, Custom Reports, Case Studies, Funder, ML	operational management and validation	no Admin
`ML`	ML, Case Studies	event-by-event operational work	no KPI, reports, funder, or admin access

`Admin`	all views	user management, sync control, full reporting	highest responsibility
`Funder`	Funder only	safe high-level reporting	no operational drill-down or personal data

4. Screen-by-screen guide

4.1 KPI Dashboard



Use `KPI Dashboard` for:

- headline KPI review
- checking delivery, governance, and partnerships
- opening drill-downs behind KPI cards

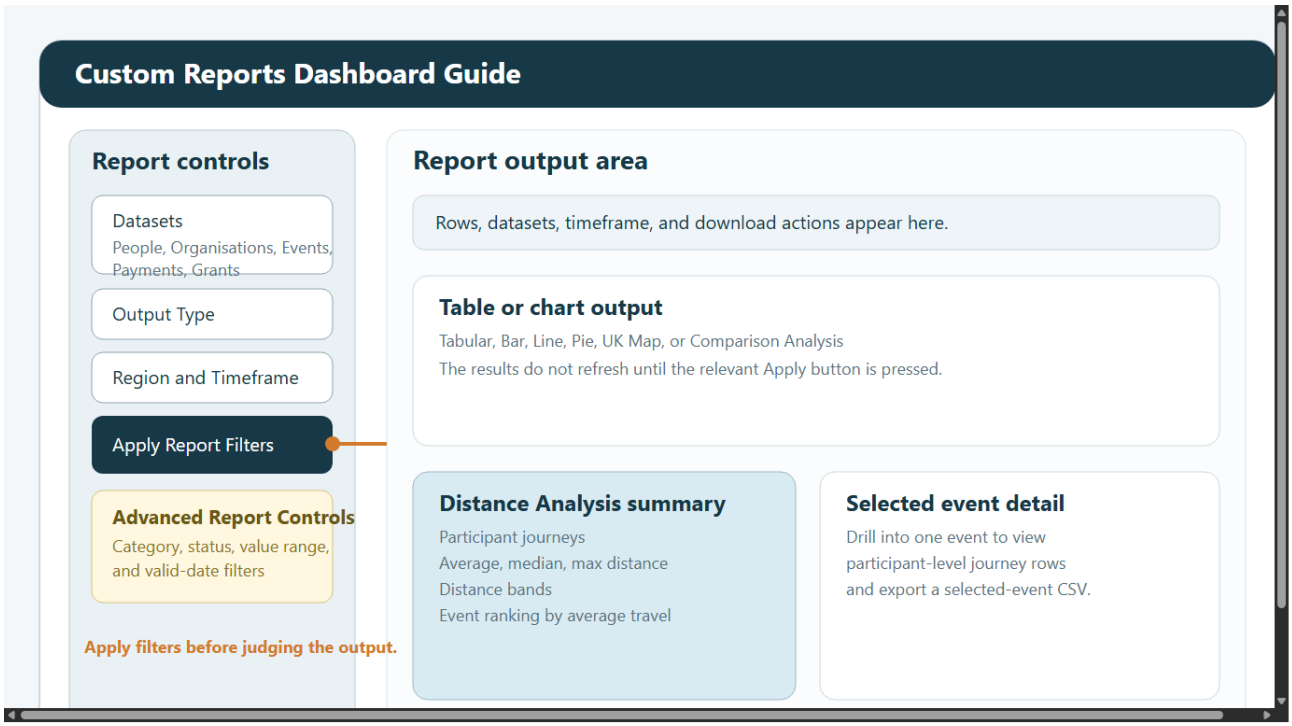
Typical workflow:

1. Choose a region.
2. Choose a timeframe.
3. Choose a KPI section.

4. Review the cards.
5. Open drill-downs where needed.

Use this screen first when you want the fastest answer.

4.2 Custom Reports Dashboard



Use `Custom Reports Dashboard` for:

- row-level tables
- charts
- filtered analysis
- exports
- comparison work
- distance analysis

Typical workflow:

1. Choose one or more datasets.

2. Choose an output type.
3. Set region and timeframe.
4. Click `Apply Report Filters`.
5. Use advanced filters if needed.
6. Review or export the result.

This screen uses two levels of filtering:

- the main report filters control datasets, output type, region, and timeframe
- the advanced filters refine the rows after the main report has loaded

Available datasets can include:

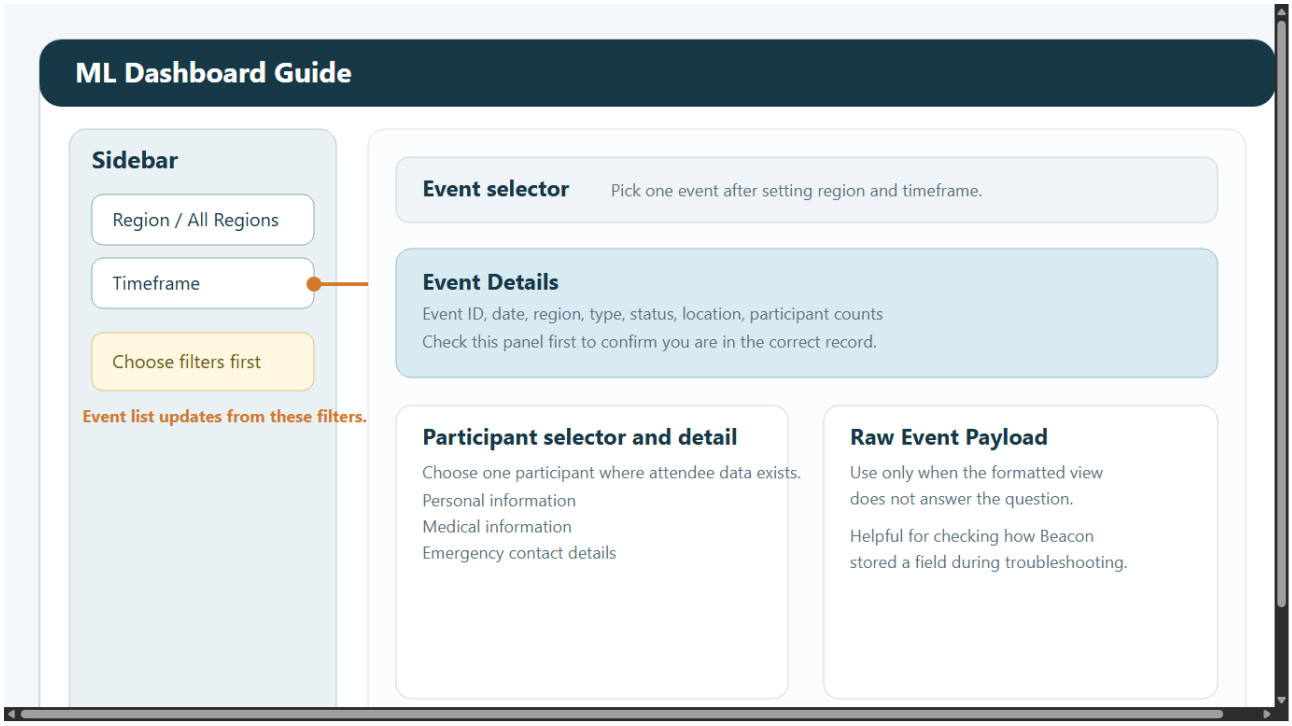
- `People` where the role allows it
- `Organisations`
- `Events`
- `Payments`
- `Grants`

Available output types include:

- `Tabular`
- `Bar`
- `Line`
- `Pie`
- `UK Map`
- `Comparison Analysis`
- `Distance Analysis`

Use `Tabular` for row checking and exports, `Line` for time trends, `Comparison Analysis` for direct group-versus-group comparison, and `Distance Analysis` for participant travel summaries.

4.3 ML Dashboard



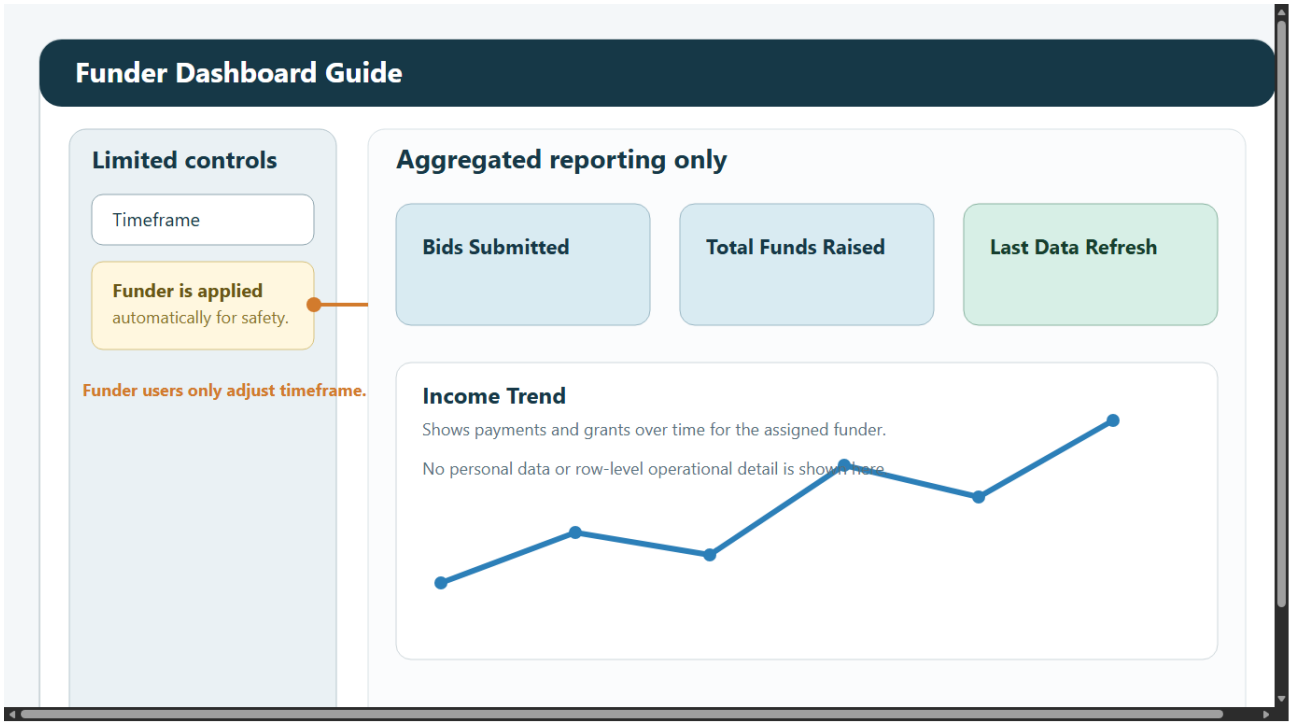
Use `ML Dashboard` for:

- reviewing one event at a time
- checking event details
- reviewing participant information where the role allows it
- reviewing medical and emergency information where available

Typical workflow:

1. Set region and timeframe.
2. Choose the event.
3. Review `Event Details`.
4. Review participant or additional event information.

4.4 Funder Dashboard



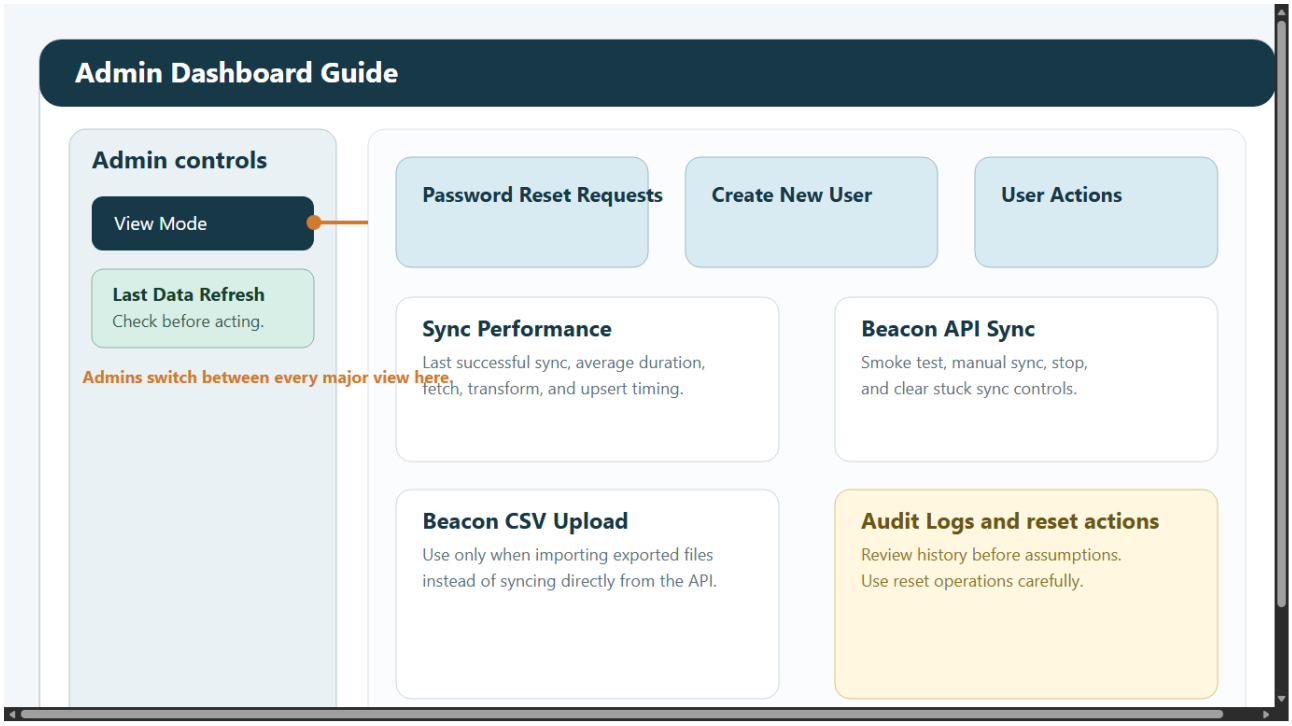
Use `Funder Dashboard` for:

- safe external-style reporting
- bids submitted
- funds raised
- funding trends over time

Typical workflow:

1. Set the timeframe.
2. Review the headline cards.
3. Review the trend.
4. Check `Last Data Refresh`.

4.5 Admin Dashboard



Use `Admin Dashboard` for:

- creating and updating users
- resetting passwords
- checking sync health
- running manual sync actions
- reviewing audit history

Admin work should be deliberate and reasoned because many actions affect other users.

4.6 Case Studies

Use `Case Studies` for:

- reading stories and testimonials
- adding narrative evidence to reporting
- uploading new qualitative evidence

Typical workflow:

1. Filter first to avoid duplicates.
2. Review existing entries.
3. Add a clear title, date, region, and story text when uploading.

4.7 Data Request Form

Use `Data Request Form` for formal data access requests.

All fields are required:

- `Name`
- `Email`
- `Date`
- `Time`
- `Reason for data request`

When a request is submitted, `Admin` and `Manager` users are notified in the dashboard.

Admins can also use the same page to grant temporary access permissions to a single user with an expiry date and time.

5. Role-by-role guide

5.1 RPL

RPL users mainly work with:

- `KPI Dashboard`
- `Custom Reports Dashboard`
- `Case Studies`
- `Data Request Form`

Best for:

- summary monitoring
- regional reporting
- structured exports
- narrative evidence

Important limit:

- RPL users should not see personal data

5.2 Manager

Managers mainly work with:

- `KPI Dashboard`
- `Custom Reports Dashboard`
- `Case Studies`
- `Data Request Form`
- `ML Dashboard`
- `Funder Dashboard`

Best for:

- KPI validation
- operational review
- event-level checking
- leadership reporting
- sponsor-facing quality assurance

5.3 ML

ML users mainly work with:

- `ML Dashboard`
- `Case Studies`
- `Data Request Form`

Best for:

- checking one event at a time
- confirming operational details
- reviewing participant information where available

5.4 Admin

Admins can use every view and are responsible for:

- user management
- password resets
- sync review
- manual refresh actions
- audit and support work
- temporary access review and granting

5.5 Funder

Funder users mainly work with:

- `Funder Dashboard`
- `Data Request Form`

Best for:

- high-level funding review
- restricted summary reporting

6. Common tasks

6.1 Check a KPI

1. Open `KPI Dashboard`.
2. Set region and timeframe.
3. Choose the KPI section.

4. Review the headline card.
5. Open the drill-down if needed.

6.2 Build a report

1. Open `Custom Reports Dashboard`.
2. Choose the datasets.
3. Choose an output type.
4. Apply the main filters.
5. Apply advanced filters if required.
6. Review the result.
7. Export CSV if needed.

6.3 Review participant travel

1. Open `Custom Reports Dashboard`.
2. Choose `Distance Analysis`.
3. Apply the main filters.
4. Review the summary metrics.
5. Drill into a single event if needed.
6. Export the results if needed.

6.4 Review a single event

1. Open `ML Dashboard`.
2. Set region and timeframe.
3. Choose the event.
4. Review event details.
5. Review participant or operational information as needed.

6.5 Handle a password reset

1. Open `Admin Dashboard`.
2. Open `Password Reset Requests`.
3. Set a temporary password.
4. Ask the user to change it after sign-in.

6.6 Submit or review a data request

1. Open `Data Request Form`.
2. Complete the required fields.
3. Submit the request.

4. If you are an `Admin` or `Manager`, review the submitted request list and update its status.
5. If you are an `Admin`, grant temporary access only where justified and with an expiry time.

7. How to read the main outputs

7.1 Headline cards

Best for:

- quick checks
- status updates
- meeting preparation

7.2 Drill-downs

Best for:

- understanding what sits behind a number
- checking whether records look reasonable
- validating unusual totals

7.3 Reports

Best for:

- structured analysis
- exports
- comparison across regions, dates, statuses, or categories

7.4 Case studies

Best for:

- adding context to a number
- giving a real-life example
- supporting reports with narrative evidence

8. Good working practice

- check `Last Data Refresh` before using figures
- widen filters first if something appears to be missing
- use the correct screen for the task
- validate unusual numbers before circulating them
- handle personal data carefully and only where the role allows it

9. Troubleshooting

No data is showing

1. Widen the timeframe.
2. Try `All Regions` where available.
3. Confirm that you are in the correct screen.

A report is not updating

1. Click `Apply Report Filters`.
2. Click `Apply Advanced Filters` if you changed advanced options.

Participant names are missing

- not all source records include names
- some roles are not permitted to see personal data

The dashboard looks out of date

1. Check `Last Data Refresh`.
2. Ask an `Admin` to review sync health if needed.

A user cannot do something they expect to do

1. Check the user's role first.
2. Confirm whether the task belongs in another view.
3. Ask an `Admin` if access may need to change.
