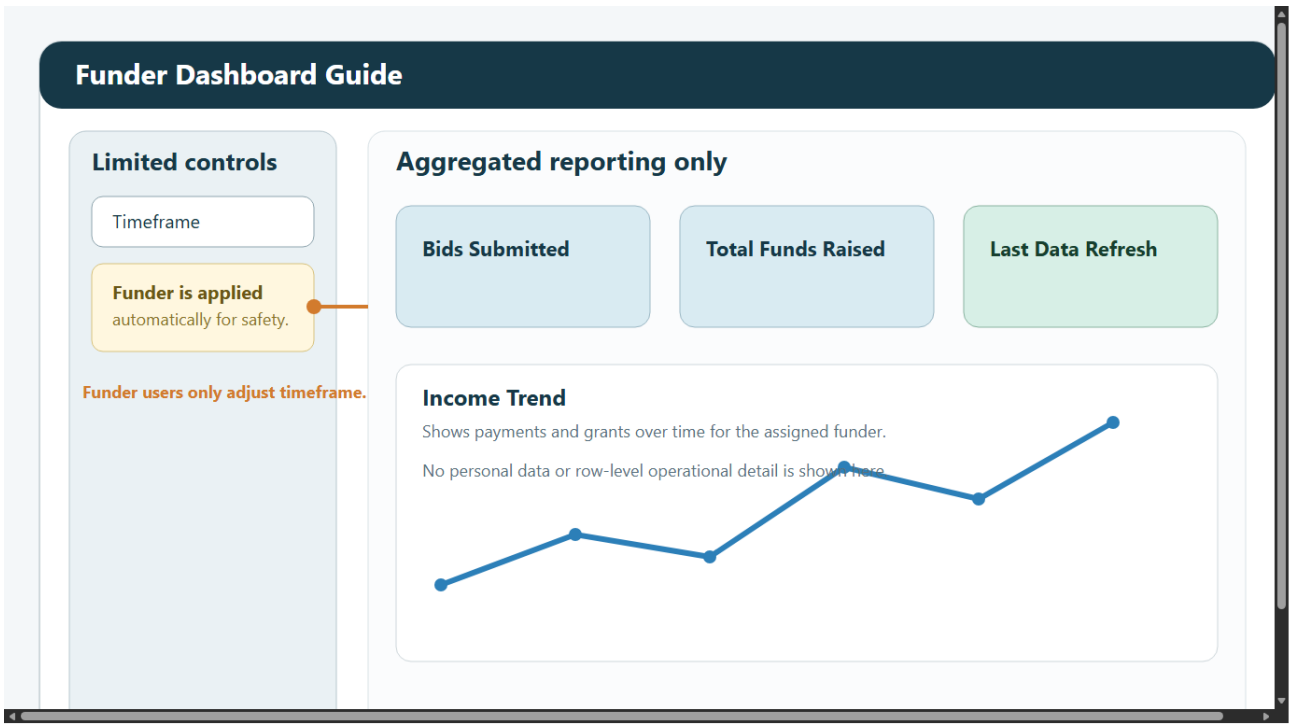
Funder Dashboard Manual

Audience: Funder users

Scope: safe, high-level funding and delivery summary information



1. Introduction

This manual explains how funder users should use the dashboard.

The Funder role is designed to provide a safe, clear summary view without exposing operational or personal detail.

Funder users can open:

- `Funder Dashboard`
- `Data Request Form`

Funder users cannot open:

- `Admin Dashboard`
- `KPI Dashboard`
- `Custom Reports Dashboard`
- `ML Dashboard`
- `Case Studies`

This role is intentionally limited. It is designed for high-level review rather than investigation.

2. What the Funder Dashboard is for

Use this dashboard when you want to answer questions such as:

- how many bids have been submitted
- how much funding has been raised
- how funding is changing over time
- whether the dashboard has refreshed recently enough to rely on

This view is designed to be readable, safe, and appropriate for restricted or external-facing use.

3. Signing in and first checks

When you sign in:

1. Enter your email address and password.
2. Change your password if prompted.
3. Confirm the timeframe you want to review.
4. Check `Last Data Refresh` before using the figures.

The refresh time matters. A number may be correct but still not current enough for your meeting or report.

4. What you will see

The `Funder Dashboard` usually includes:

- summary metric cards
- bid totals
- funding totals
- a trend view over time
- a refresh timestamp

It does not include:

- personal data
- participant-level records
- detailed event records
- operational drill-down
- custom reporting tools

If you need more detail than this view provides, request a managed report from the organisation rather than expecting to find that detail in the dashboard.

5. Privacy and access

The `Funder` role is intentionally restricted.

This usually means:

- region is fixed to a high-level context such as `Global`
- operational screens are hidden
- personal data is never shown

These limits are not an error. They are part of how the role is designed.

6. Filters

Funder users have limited controls by design.

6.1 What you can change

You can usually change:

- timeframe

6.2 What you cannot change

You normally cannot change:

- region
- user settings
- operational access
- detailed report structure

Typical timeframe options include:

- `All Time`
- `Year`
- `Quarter`
- `Month`
- `Custom Range`

7. Reading the dashboard

7.1 Headline cards

The top cards usually show:

- `Bids Submitted`
- `Total Funds Raised`

Use these cards when you need a quick factual statement such as:

- how many bids were submitted in the selected period
- how much funding was raised in the selected period

Always check the timeframe before quoting either value.

7.2 Trend view

The trend view helps you understand whether activity is:

- steady
- seasonal
- concentrated in particular periods

Use it to compare a recent period with a wider one. For example, look at `All Time` first, then narrow to `Year` or `Quarter`.

7.3 Last Data Refresh

Always check the refresh time before using the dashboard in:

- a report
- a review meeting
- a funder update
- a presentation

If the refresh date looks too old, contact the dashboard administrator rather than relying on stale figures.

8. Step-by-step workflows

8.1 Prepare for a review meeting

1. Open the dashboard.
2. Set the timeframe for the period you care about.
3. Review `Bids Submitted`.
4. Review `Total Funds Raised`.

5. Review the trend view.
6. Check `Last Data Refresh`.
7. Note the figures only after confirming the timeframe and refresh point.

8.2 Compare recent activity with a wider period

1. Start with `All Time`.
2. Review the overall pattern.
3. Narrow to `Year`, `Quarter`, or `Month`.
4. Compare how the cards change.
5. Compare how the trend shape changes.

8.3 Check whether figures are current enough to use

1. Open the dashboard.
2. Look at `Last Data Refresh`.
3. Decide whether that refresh point is suitable for your meeting, report, or update.
4. If not, contact the dashboard administrator.

9. Data Request Form

Funder users can also open `Data Request Form`.

Use it when:

- you need a more formal data request
- you need to explain why additional information is being requested
- you want the request reviewed by the operational team

All fields are required:

- `Name`
- `Email`
- `Date`
- `Time`
- `Reason for data request`

When you submit a request, `Admin` and `Manager` users are notified in the dashboard.

10. What this role cannot do

Funder users cannot:

- switch to operational dashboards
- inspect personal records
- run custom reports
- review event-level participant detail
- manage users
- run sync actions

These limits are intentional and support privacy-safe reporting.

11. Good working practice

- check the timeframe before quoting any number
- check the refresh date before sharing any figure
- use the dashboard for summary reporting, not detailed investigation
- request a managed report if you need more context
- use the Data Request Form when you need formal review of an additional request

12. Troubleshooting

I cannot see any data

1. Widen the timeframe.
2. Check whether the assigned funder context has activity in that period.
3. If the screen still appears empty, contact the dashboard administrator.

The figures look old

1. Check `Last Data Refresh`.
2. If it looks too old for your needs, contact the dashboard administrator.

I need participant-level evidence

That is not available in the `Funder` role. Request a managed report from the organisation instead.

I expected to see another dashboard screen

The `Funder` role includes only the `Funder Dashboard`. This is expected behaviour.
