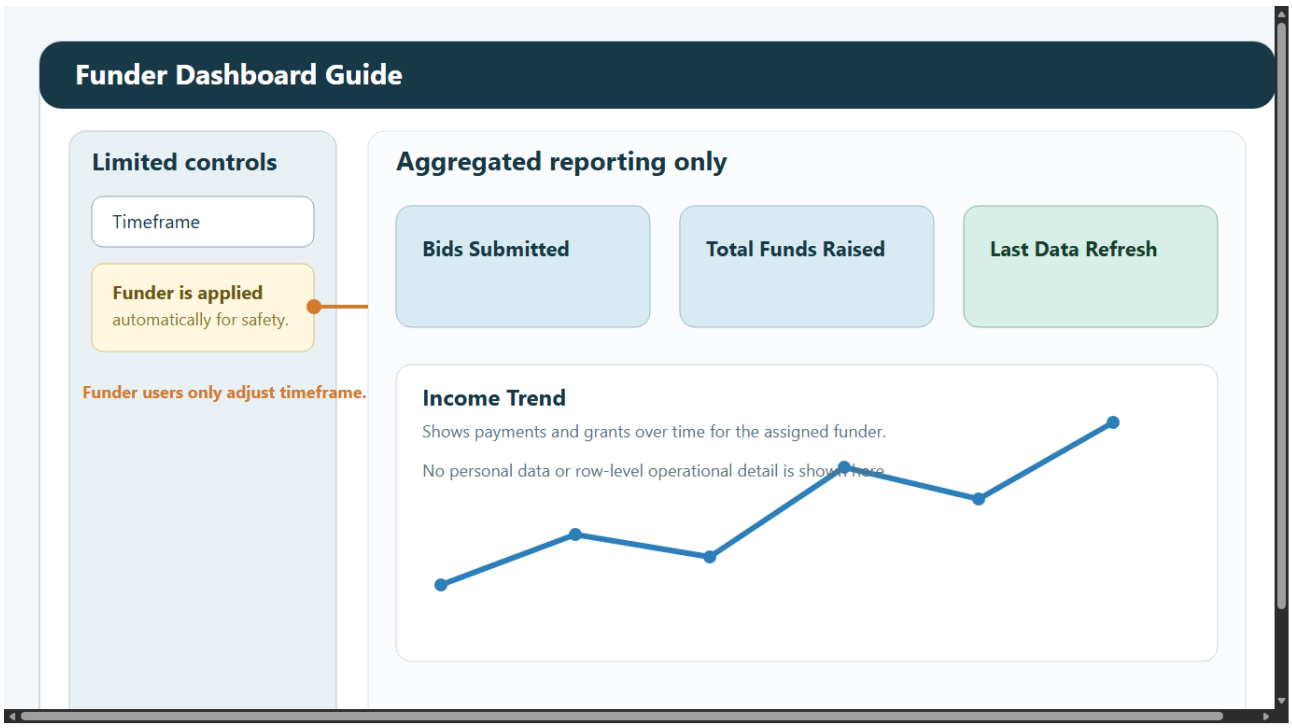
Funder Dashboard Manual

Audience: Funder users

Scope: privacy-safe, aggregated funding and delivery summary information



1. Role overview

The Funder Dashboard is designed for external or restricted users who need a concise, GDPR-safe reporting view.

Available view:

- Funder Dashboard

Funder users cannot access:

- `Admin Dashboard`
- `KPI Dashboard`
- `Custom Reports Dashboard`
- `ML Dashboard`
- row-level operational drill-down

2. What this dashboard is for

The screen is intended to answer high-level questions such as:

- how many bids have been submitted
- how much funding has been raised
- what the income trend looks like over time
- when the dashboard was last refreshed

Your assigned funder is applied automatically, so the page opens in a safe filtered state.

3. Signing in and getting started

1. Open the dashboard link.
2. Sign in with your email address and password.
3. Change your password if prompted.
4. Review the current timeframe and the `Last Data Refresh` timestamp before using the numbers in a meeting or report.

4. Privacy model

The Funder Dashboard is intentionally restricted.

It shows:

- aggregated counts
- aggregated funding totals
- grouped charts and summaries

It does not show:

- personal data
- attendee-level records
- named participants
- raw operational drill-down rows

If you need a deeper pack, request it from the organisation rather than expecting it from the Funder view.

5. Filters

Available controls are intentionally limited.

As a Funder user:

- region is fixed to `Global`
- your assigned funder is already applied
- you can change the timeframe

Typical timeframe options:

- `All Time`
- `Year`
- `Quarter`
- `Month`
- `Custom Range`

6. Reading the dashboard

Headline metrics

The top-level cards show:

- `Bids Submitted`
- `Total Funds Raised`

These update with the selected timeframe and your assigned funder.

Income trend

The `Income Trend` chart summarises how funding has moved over time.

It combines:

- payments
- grants

Use it to identify whether activity is:

- steady
- seasonal
- concentrated in particular periods

Last Data Refresh

Use the refresh timestamp to check whether the figures are current enough for your purpose.

If the timestamp appears too old, ask the dashboard administrator before relying on the numbers.

7. Typical funder tasks

Prepare for a review meeting

5. Open the dashboard.
6. Set the timeframe for the reporting period.
7. Review `Bids Submitted`, `Total Funds Raised`, and the `Income Trend`.
8. Note the `Last Data Refresh` timestamp.

Compare current activity with a wider period

9. Start with `All Time`.
10. Review the overall trend.

11. Narrow to `Year`, `Quarter`, or `Month`.
12. Compare how the headline cards change.

8. What funder users cannot do

Funder users cannot:

- switch to the other dashboards
- inspect personal records
- access participant detail
- run custom reports
- manage users or sync operations

These limits are intentional and support privacy-safe external reporting.

9. Troubleshooting

I see no data

- widen the timeframe first
- confirm your assigned funder has grant or payment records in the selected period

The figures look out of date

- check `Last Data Refresh`
- contact the dashboard administrator if the timestamp is older than expected

I need participant-level evidence

- that is not available in the Funder role
- request a managed report from the organisation instead
