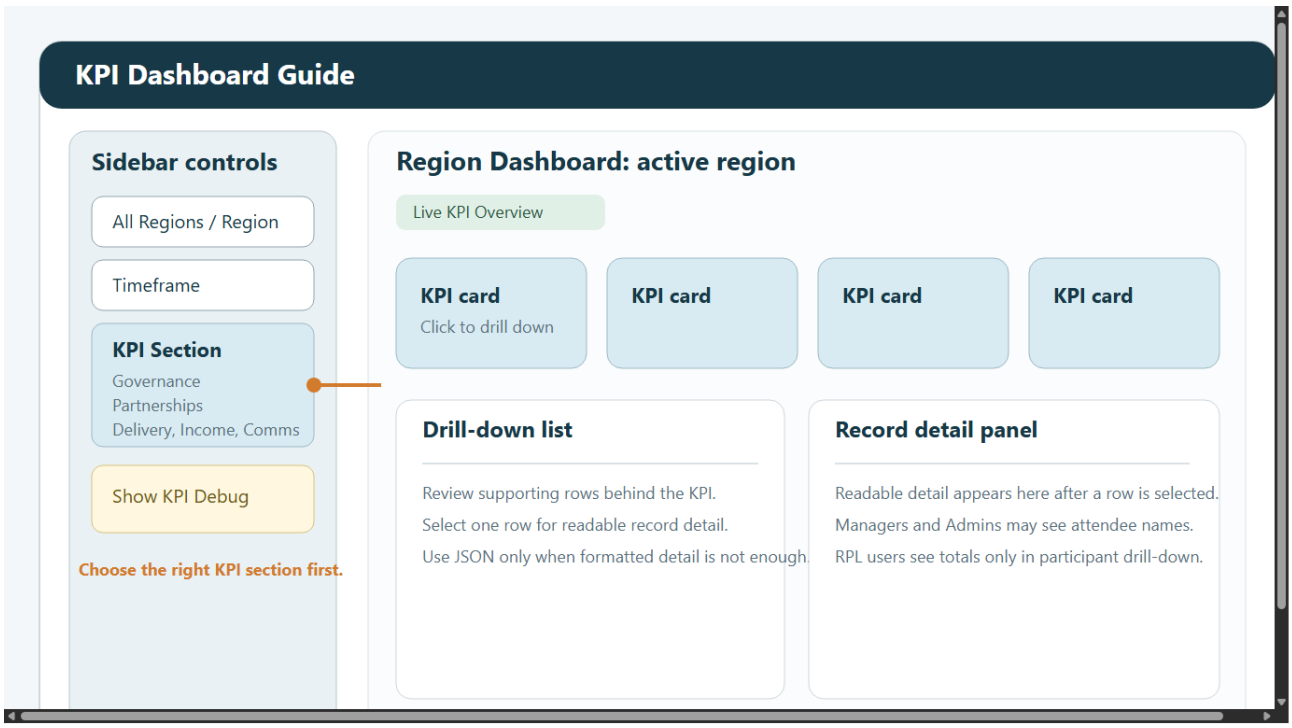
RPL Dashboard Manual

Audience: Regional Programme Leads (RPL)

Scope: KPI monitoring, self-service reporting, exports, and case study management



1. What this manual covers

RPL users use the dashboard to monitor delivery, review trends, validate headline numbers, and prepare evidence for internal reporting.

RPL access includes:

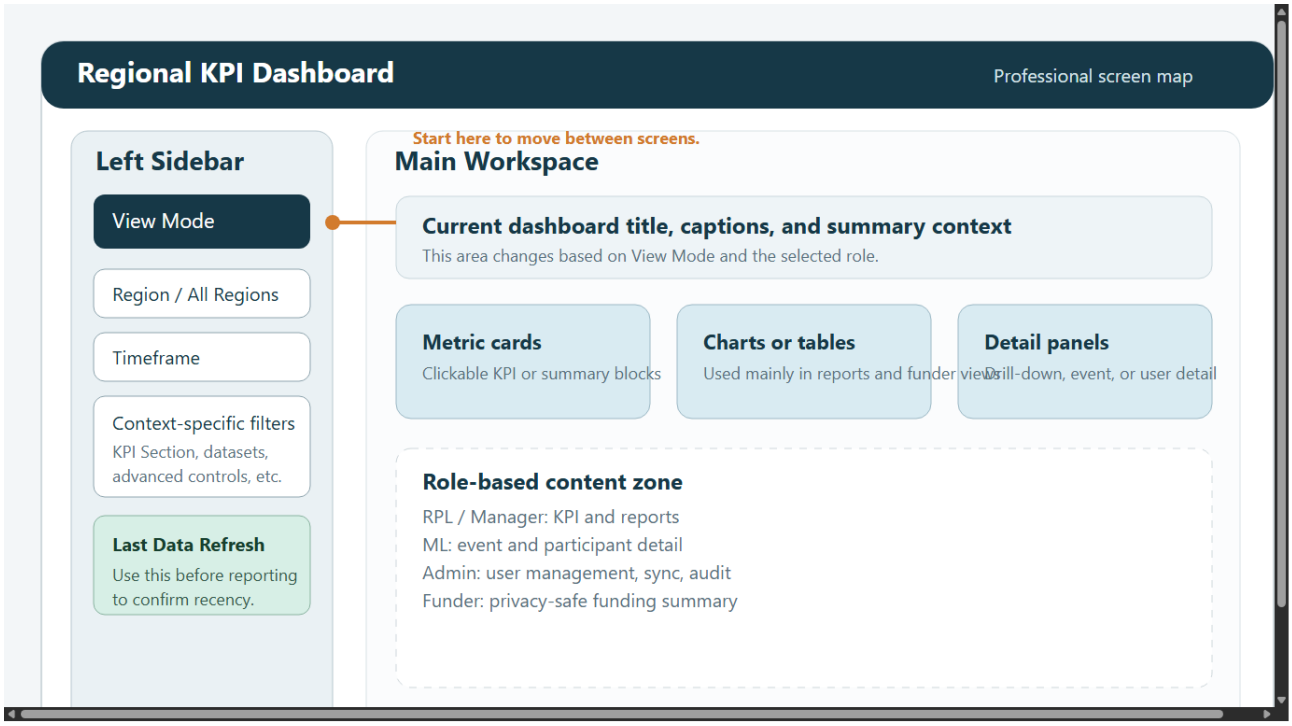
- KPI Dashboard
- Custom Reports Dashboard
- Case Studies

RPL users cannot access:

- `Admin Dashboard`
- `ML Dashboard`
- named attendee details inside KPI event drill-downs

2. Quick start

1. Sign in with your email address and password.
2. Use `View Mode` in the left sidebar to choose the screen you need.
3. Start with `All Regions` and a broad timeframe if you are not sure where data sits.
4. Narrow the filters once you confirm the records are present.



3. Shared filters and navigation

Most RPL tasks begin in the left sidebar.

Main controls:

- View Mode
- All Regions or a specific region
- Timeframe
- KPI Section on the KPI screen

Typical timeframe options:

- All Time
- Year
- Quarter
- Month
- Week
- Custom Range

Best practice:

- start broad
- confirm the data is present
- then narrow to the reporting period you need

4. KPI Dashboard

The KPI Dashboard is the fastest way to review headline figures.

4.1 Screen tour

Use KPI Section to move between:

- Governance
- Partnerships
- Delivery
- Income when region is Global
- Comms when region is Global
- Case Studies

The page title shows the active region. KPI cards update from the chosen filters.

4.2 What each section is for

`Governance`

- steering group and volunteer-related metrics
- useful for oversight and governance reporting

`Partnerships`

- active organisations and partnership-related counts
- useful for regional relationship tracking

`Delivery`

- events delivered
- total participants
- aggregated demographics and other delivery measures

`Income`

- available only when the region is `Global`
- funding totals, bids submitted, partner-related measures

`Comms`

- available only when the region is `Global`
- communications-related summary measures

`Case Studies`

- qualitative evidence alongside KPI reporting

4.3 Drill-down and validation

Click any KPI card to inspect the source records behind the number.

Typical flow:

5. Click the KPI card.
6. Review the list of supporting rows.
7. Select a row to inspect it in readable detail.
8. Open `Technical View (JSON)` only if you need the raw structure.

Use drill-down when:

- a KPI looks unexpectedly high or low
- you need confidence before sharing a figure
- a stakeholder asks which records are included

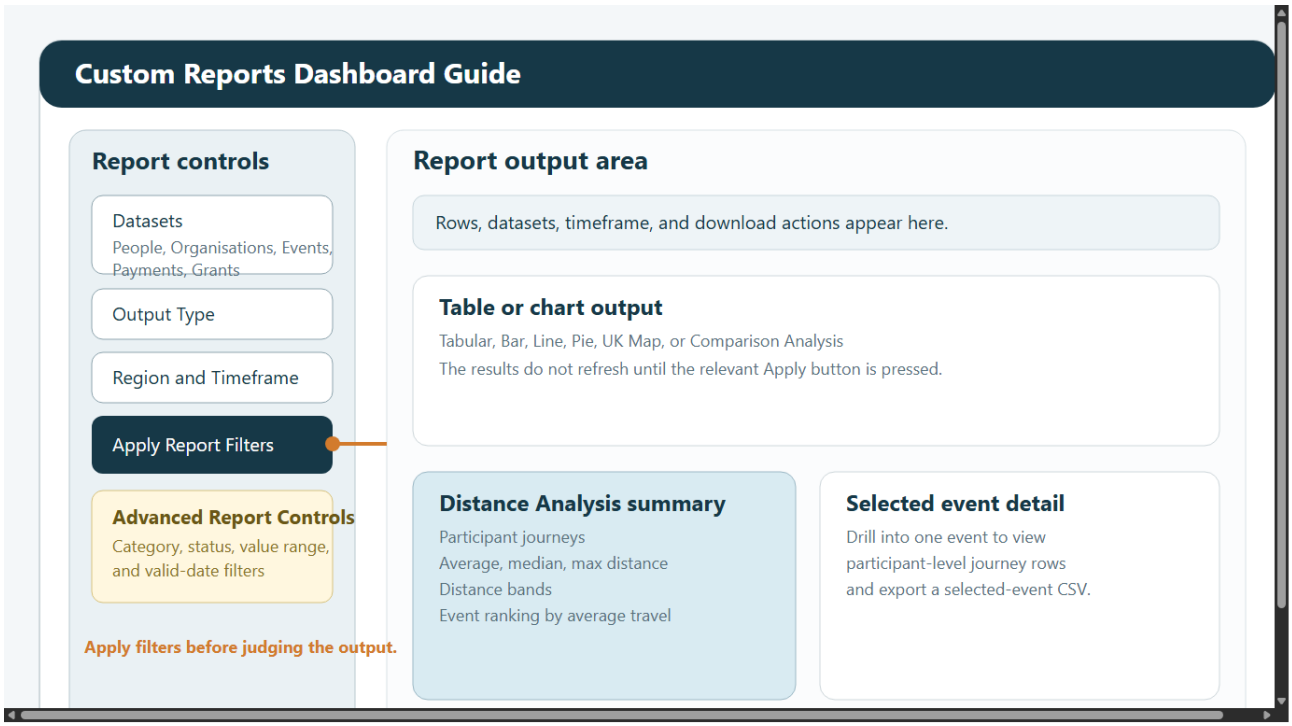
4.4 Important RPL privacy limit

In `Delivery > Total Participants`, RPL users can review totals but not named attendee details or IDs.

This is intentional. If participant-level operational detail is required, ask a Manager or Admin to review it in the appropriate view.

5. Custom Reports Dashboard

The Custom Reports screen is the main self-service analysis workspace for RPL users.



5.1 What you can do

- combine datasets
- build tables and charts
- narrow by date and region
- apply advanced filters
- download CSV files for offline analysis

5.2 Datasets

Available datasets:

- `People`
- `Organisations`
- `Events`
- `Payments`
- `Grants`

5.3 Output types

Available outputs:

- `Tabular`
- `Bar`
- `Line`
- `Pie`
- `UK Map`
- `Comparison Analysis`
- `Distance Analysis`

5.4 Standard report workflow

9. Choose one or more datasets.
10. Select an output type.
11. Set region and timeframe.
12. Click `Apply Report Filters`.
13. Open `Advanced Report Controls` if you need extra filtering.
14. Click `Apply Advanced Filters`.
15. Review the results and export if needed.

If you change a filter and the report does not move immediately, that is expected until the relevant `Apply` button is clicked.

5.5 Advanced filtering

Advanced controls can be used to limit the result set by:

- dataset
- category
- status
- metric value range
- rows with valid dates only

This is useful for tidying large mixed reports before export.

5.6 Distance Analysis

Distance Analysis estimates participant travel from home postcode to the event location.

It can show:

- participant journey count
- average, median, and maximum distance
- distance bands
- events ranked by average travel distance
- participant-level journey rows

Recommended workflow:

16. Set `Output Type` to `Distance Analysis`.
17. Keep `Events` selected in the dataset filter.
18. Click `Apply Report Filters`.
19. Limit to event types if needed.
20. Decide whether to keep `Only include rows with resolved distance` turned on.
21. Use `Drill down into event` to inspect one event in detail.
22. Download the selected-event or full CSV when needed.

Important notes:

- road distance is used when routing is configured
- otherwise the report falls back to straight-line miles
- missing participant or event postcode data will reduce the available rows

6. Case Studies

Case Studies adds qualitative evidence to the numbers.

Use it to:

- read regional stories and testimonials
- filter by date and region
- upload a new case study for future reporting

Suggested workflow for uploads:

23. Open `Case Studies`.

24. Choose `Upload New Case Study`.
25. Add a clear title.
26. Paste the story or testimonial.
27. Enter the correct date.
28. Assign the correct region.
29. Submit and review the saved result.

7. Typical RPL tasks

Check a KPI before a meeting

30. Open `KPI Dashboard`.
31. Choose the right section.
32. Set the region and timeframe.
33. Click the KPI card to validate the supporting rows.

Prepare a CSV for offline analysis

34. Open `Custom Reports Dashboard`.
35. Choose the relevant dataset and output type.
36. Apply filters.
37. Refine with advanced controls if required.
38. Click `Download Report CSV`.

Add a case study to support a monthly update

39. Open `Case Studies`.
40. Filter first to avoid duplicating an existing story.
41. Upload the new case study with a clear title and date.

8. Troubleshooting

I see no KPI data

- check region and timeframe first
- try `All Regions` and `All Time`
- confirm you are on the correct KPI section

The report looks unchanged

- click `Apply Report Filters`
- click `Apply Advanced Filters` if you changed advanced controls

Distance Analysis shows no rows

- confirm `Events` is included as a dataset
- widen the date range
- try clearing `Only include rows with resolved distance`

I cannot see participant names

- that is expected for the RPL role in KPI drill-downs

9. Good working practice

- use KPI cards for fast monitoring
- use Custom Reports when you need evidence, export, or charting
- validate unusual numbers with drill-down before circulating them
- pair a quantitative report with a case study where possible
